SVG Img vs. Inline implementation

Img

Just as you would with any other image. You can also use SVGs in a <picture> element. Note that this method limits manipulation functionality.

Inline

Putting your SVG code inline will save an HTTP request but it will mean the image isn't cached by the browser. It is the easiest way to manipulate, however maintaining inline SVGcode can be a pain.

There are more different implementation options. see: * Source: <https://svgontheweb.com/>

Example: Product compare inline code

```
1 <svg xmlns="http://www.w3.org/2000/svg" xmlns:xlink="http://www.w3.org/1999/xlink" width="60" height="60">
2 <defs>
3 <path id="a" d="M0 0h24v24H0V0z"></path>
4 </defs>
5 <clipPath id="b">
6 <use xlink:href="#a" overflow="visible"></use>
7 </clipPath>
```

7     </path>
```

HTML

1

✓ Do

- Set label via label tag for accessibility.
- Use TTerse include functionality to embed the SVG tick icon.

✗ Don't

- No transition effects.
- Don't use toggle slider.
- On hover change cursor to pointer, no other hover effects.

Dropdown

Basic select

```
1 <select class="gh-basic__select">
2   <option selected="">Option 1</option>
3   <option>Option 2</option>
4   <option>Option 3</option>
5 </select>
```

| | | | | | |
|--|-----------------------------|-----|---------|-----|---------------|
| | Border = Silver | HEX | #C0C0C0 | RGB | 192, 192, 192 |

Link

Blue primary link underlined

This is the default, most common link style.

Blue primary link underlined

[Blue primary link underline](#)

```
1 <a title="Link Title" href="#">Blue primary link underline</a>
```

Blue secondary link

This link style is used exclusively on the product page.

[Blue secondary link](#)

```
1 <a href="#" class="gh-link--secondary" rel="nofollow">Blue secondary link</a>
```

List

Loading

Dialog (Modal)

The dialog module is a ghpak which is embedded as TTerse Wrapper (metacpan/template-toolkit.org).

There are already some reusable dialogs in the dialog/include directory. These may need some additional setup to run properly.

Pricealert dialog

Content Styles

Columns

You can have a two-column layout, which will be one-column on mobiles in portrait mode and on devices with screens smaller than 620px width.

Actions

Padding to the bottom is added by default. There are two options of using actions elements.

(1) Fixed to bottom

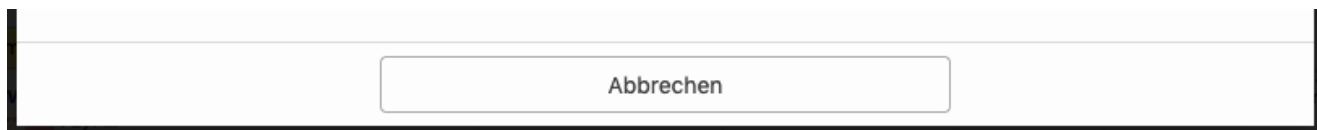

The fixed action bar should two buttons. If there is just one button for i.e. save oder submit, add another button for closing the dialog window. The main action button uses the class `.button` the secondary action `.button.button--outlined`.

Always use two buttons.

Do

Do not use one single button in the fixed bottom bar.

Don't

(2) Inlined

Inlined buttons will be full-sized on mobiles.

Sizing

Desktop

Width: 100% - 2rem (max-width: 800px)

Height: 100% - 2rem

Exceptions: Pricehistory chart has no max-width. Pinned dialogs have min-width: 360px.

Mobile

Width: 100% - 2rem

Height: 100% - 2rem

Exceptions: Screens with smaller than 360px (width), have full 100% width and height.

Exceptions

Pricealert Dialog

The pricealert is a ghpak on its own. It is embeddable through *gh/static/ghpak/pricealert_modal/hook.tpl*.

Pricehistory Chart Dialog

The pricehistory chart is not a dialog on mobiles and tablets. On Desktops it doesn't have a max width of 800px.

Login / Register Dialog

The authentication dialog is located at *geizhals-auth/c2/*. This dialog uses mainly styles from the dialog stylesheet, but it is not embedded through the wrapper function. It is a custom preact app. It has a max-width of 360px on desktops. Changes within the dialog-HTML structure must be applied manually.

Categorylist

On mobiles and tablets the categorylist and its dialogs are an independent preact app similiar to the authentication. But located within the ghpak folder. They have an embedded dialog for availability, but the main filter function is not relying on dialog styles, script and structure.

Gallery

This doesn't have any dialog elements. It is similiar to categorylist a preact app on its own.

Light Box

Used for displaying an image gallery within a [modal window](#).
Light box is used on product pages and tag pages.

Login

The image shows a login form titled "Einloggen" (Login) with a close button (X) in the top right corner. The form is set against a dark blue background. It contains two input fields: "E-Mail-Adresse" (Email Address) with the value "geizhals.testing@gmail.com" and "Passwort" (Password) with masked characters. A "Passwort vergessen?" (Forgot password?) link is next to the password field. Below the inputs is a green "Einloggen" button. Underneath is a separator line with the word "oder" (or). Below that is a Facebook login button with the Facebook logo and the text "Einloggen mit Facebook". At the bottom, there is a link "Hast du noch keinen Geizhals-Account? Jetzt registrieren" (Do you still not have a Geizhals account? Register now). Below this link, the text "Vorteile für registrierte Nutzer:" (Benefits for registered users:) is followed by a list of four benefits: "Synchronisierte Wunschlisten" (Synchronized wishlists), "Produkte und Händler bewerten" (Evaluate products and retailers), "Preisalarme setzen" (Set price alerts), and "Suchen abonnieren" (Subscribe to searches).

Layout

Page Layout

Table Layout

Use a table layout for flexibly viewing and managing large sets of data. The layout uses 100% of the viewport. Items are displayed as rows with their fields organized in columns.

The columns are fixed width and use as much horizontal space as necessary. Columns do not resize when the window changes width. Users can choose which columns to show and how wide each column is. If the grid is wider than the viewport, users horizontally scroll to see more data.

The table can be of infinite length. Data is loaded as the user scrolls. This lets your users access their data most efficiently. Avoid using manual pagination controls, which reduce efficiency.

Product table - Used for product (top-100; ...)
